Amendments to the Specification

Please replace the paragraph beginning on page 18, line 16, with the following rewritten paragraph:

With reference to FIG. 5, the acquisition of font data for devices and displays entails multiple system calls to the operating system 46 to obtain a copy of the GDI/font resource data. In S500, the server 80 calls the operating system, or other resource source, to request the names of the fonts available. The operating system 46 returns the requested font name data to the font cache store 86 in S510. This is referred to herein as a "Font Cache Store Call Back." Next, the server 80 calls the operating system 46 to request the font size data in S520. Similarly, the operating system 46 returns the font size data in S530. Next, in S540, the server 80 requests the font handle data. The operating system 46 returns the data at S550. As would be understood, different ordered requests and additional or varying data request procedures are within the scope of the present invention.
